Professional Summary

I'm a Computer Science / AI-ML undergraduate (CGPA 9.12/10) who works comfortably across ML, backend services, and real-time web apps – turning rough ideas into things that hold up under real data and real users, proven repeatedly across hackathons and competitive ML challenges.

Education

SRKR Engineering College, Bhimavaram

CGPA: 9.12 / 10.00

B.Tech in Artificial Intelligence & Machine Learning

2023 – 2027

Aditya Junior College, Palakollu

Percentage: 97.6%

Senior Secondary (Intermediate)

2021 – 2023

Experience

Infosys Springboard Intern — Infosys Limited

2025

AgriYield Predictor: AI-Powered Crop Yield Forecasting System

- Built and compared multiple ML models (Random Forest, XGBoost, Linear Regression), serving the best performer through a live Flask application, and used SHAP to explain predictions in plain language.

Projects

Amazon ML Challenge — Business Entity Resolution

GitHub

Tech Stack: Python, Fuzzy String Matching (Levenshtein/Jaccard), Rule-Based Scoring

- Built an end-to-end entity resolution pipeline matching noisy business records across three data sources (train: US/India; test added an unseen France split), using fuzzy string matching (Levenshtein/Jaccard) for blocking and rule-based scoring for final matches.
- Handled real-world noise (name/address abbreviations, transliterations, missing fields) while optimizing for the precision-heavy F_{0.5} metric – ranking **3054** globally with an **F_{0.5} score of 0.9197**.

AI-Based Timetable Generation System (SIH 2025)

GitHub

Tech Stack: Python (CP-SAT, Genetic Algorithms), React.js, Node.js, MongoDB, REST APIs

- Designed a hybrid optimization engine (constraint solving + genetic algorithms) that cut real scheduling conflicts by 90%, replacing a fully manual process.
- Built three role-based React.js dashboards on a shared component library, backed by a Node.js/REST API layer.

Nebula Sketch — Real-Time Collaborative Drawing App

GitHub

Tech Stack: Next.js, Node.js, Express.js, WebSockets, Redis, Docker

- Built a live multiplayer drawing app with WebSocket updates under 100ms, using a server-authoritative model with incremental state sync to keep every client consistent, backed by Redis-managed sessions.

Technical Skills

Languages: Python, JavaScript, OOP

AI/ML: Supervised & Unsupervised Learning, Regression, Model Evaluation, SHAP, Entity Resolution, NLP

Web & Backend: React.js, Next.js, Node.js, Express.js, Flask, REST APIs, WebSockets

Data: SQL, MongoDB, Redis, Data Cleaning & Feature Extraction

Fundamentals: Data Structures & Algorithms, DBMS, Operating Systems

Tools: Git, GitHub, Docker

Certifications

- AWS Academy Graduate — Machine Learning Foundations**, Amazon Web Services (Mar 2025)
- Mastering MySQL: Database Creation & Management, SQL Queries**, Udemy (Oct 2024)
- Git and GitHub Workshop**, GDG (Oct 2024)

Achievements

- Winner — Innovation Conclave, SAMAGRA 2026** (SRKR Engineering College): Won **Rs. 2,000** for *Timetable Server*, recognized for its 90% improvement in scheduling efficiency.
- 4x National-Level Hackathon Participant**, shipping working systems under real time pressure.
